

- **Answer the question in a general way**
 - Use words from the question
- **Provide evidence from your observations or tests.**
 - Give quantitative data (measurements from your results).
*“For example,
But.....”*
- **Make a concluding statement that is based on the evidence:**
 - Use general words, don't use numbers
“Therefore.....”
- **Make an inference about what you think caused these results:**
“I think this happens because”
- **If you had data that were different from what other groups had, what do you think could have caused these results?**
- **What other questions do you have now that you want to investigate?**
